

ABSTRACT OF DISCLOSURE

A method and an apparatus for installing an input device driver by installing the input device driver in the apparatus to drive a device that performs a predetermined function while storing a device driver file, and re-installing the device driver in the apparatus using the stored device driver file. Accordingly, the provided method enables a novice computer user to easily re-install the input device driver using the stored device driver file in the computer without accessing the input device driver file, for example, stored on a CD, thereby improving reliability of the device and reducing the number of after-sale service requests.
